Experiment 13

Limitations of Low-Code Development Platforms Using Zoho Creator

Aim

To study and analyze the limitations of low-code development platforms using Zoho Creator, focusing on customization, performance, scalability, integration, security, cost and platform dependency, and to identify possible solutions for the Student Admission Enquiry Management (Advanced Edition) application.

Procedure

1. Study the features of a low-code platform and the applications it is intended to build.

2. Open the Student Admission Enquiry Management (Advanced Edition) application and examine its form, reports, workflows and advanced fields.

3. Identify where customization is restricted in layouts and available components.

4. Review performance, scalability and integration constraints as enquiries, users and documents increase.

5. Examine automation options for fee calculation, QR generation and notifications.

6. Review subscription-plan limits and advanced features.

7. Analyze security, offline access and advanced technology limitations.

8. Record the limitations found and identify a suitable solution for each.

Limitations of Low-Code Development Platforms

2.1 Limited Customization

Predefined layouts and components may restrict complete control over the admission form and applicant portal. **Solution:** use custom pages, supported UI components and scripting where available.

2.2 Performance Limitations

Performance may decrease as enquiry records, file uploads, workflows and calculations increase. **Solution:** optimize Deluge scripts, filter records and minimize unnecessary workflow runs.

2.3 Scalability Challenges

Large admission campaigns can increase storage, API, workflow and concurrent-user requirements. **Solution:** monitor usage and choose appropriate capacity or external services.

2.4 Integration Limitations

External school databases, payment services or notification systems may require supported APIs or connectors. **Solution:** use APIs, webhooks and secure connections.

2.5 Platform Dependency

Deluge scripts and configurations are platform-specific. **Solution:** maintain documentation and backups.

2.6 Cost and Usage Limitations

Users, storage, automation and advanced features may be limited by the subscription plan. **Solution:** select the plan according to admission-office usage.

2.7 Security and Compliance Challenges

Incorrect permissions could expose applicant contact details, marksheets or signatures. **Solution:** use role-based access, field restrictions and audit logs.

2.8 Limited Offline Access

Cloud-based admission applications depend on connectivity. **Solution:** define alternative procedures for connectivity failures.

2.9 Advanced Technology Limitations

Specialized AI or advanced document verification may require additional development. **Solution:** use supported integrations or external AI services with security controls.

Summary of Limitations Observed in This Project

Limitation	Example in Student Admission	Solution
Customization	Form/portal uses available components	Custom pages and scripting
Performance	Many enquiries and media files	Criteria-based fetch and optimization
Scalability	Large admission campaigns	Monitor usage; higher capacity
Integration	External school/payment services	APIs, webhooks, connectors
Vendor lock-in	Deluge and configuration are platform-specific	Documentation and backups
Security	Applicant documents and signatures	Role-based access and audit logs
Offline access	Submission depends on connectivity	Fallback procedure
Advanced technology	AI/document verification may need extension	External AI/integration

Result

The limitations of low-code development platforms were studied using the Student Admission application and a suitable solution was identified for each limitation.

Conclusion

Zoho Creator simplifies admission-application development through forms, reports, workflows and automation, but customization, performance, scalability, integration, platform dependency, cost, security, offline access and advanced-technology limitations must be considered during planning and implementation.
