Experiment 2

Setting Up a Zoho Creator Account and Exploring the Platform Architecture and Interface

Aim

To create a Zoho Creator account and explore the platform architecture, features, and user interface for developing low-code applications.

Theory

Zoho Creator is a cloud-based low-code platform for building custom business applications. Its architecture consists of: Applications (containers for all components), Forms (data collection), Reports (display and management of data), Pages (custom interfaces), Workflows (event-based automation), Deluge Script (the scripting language), and Users and Permissions (access control).

Procedure

1. Open a web browser and navigate to the Zoho Creator website.
2. Create a Zoho account or sign in using existing credentials.
3. Access the Zoho Creator dashboard.
4. Create a new application using either a blank application or a pre-built template.
5. Explore the Application Builder interface.
6. Examine the Form Designer and add sample fields such as text, number, date, and email.
7. Explore the Report Builder to view the generated records.
8. Navigate through the Workflow section to understand automation features.
9. Explore Pages, Settings, User Management, and Application Permissions.
10. Observe the overall platform architecture and note the functions of each component.

Output Screenshots

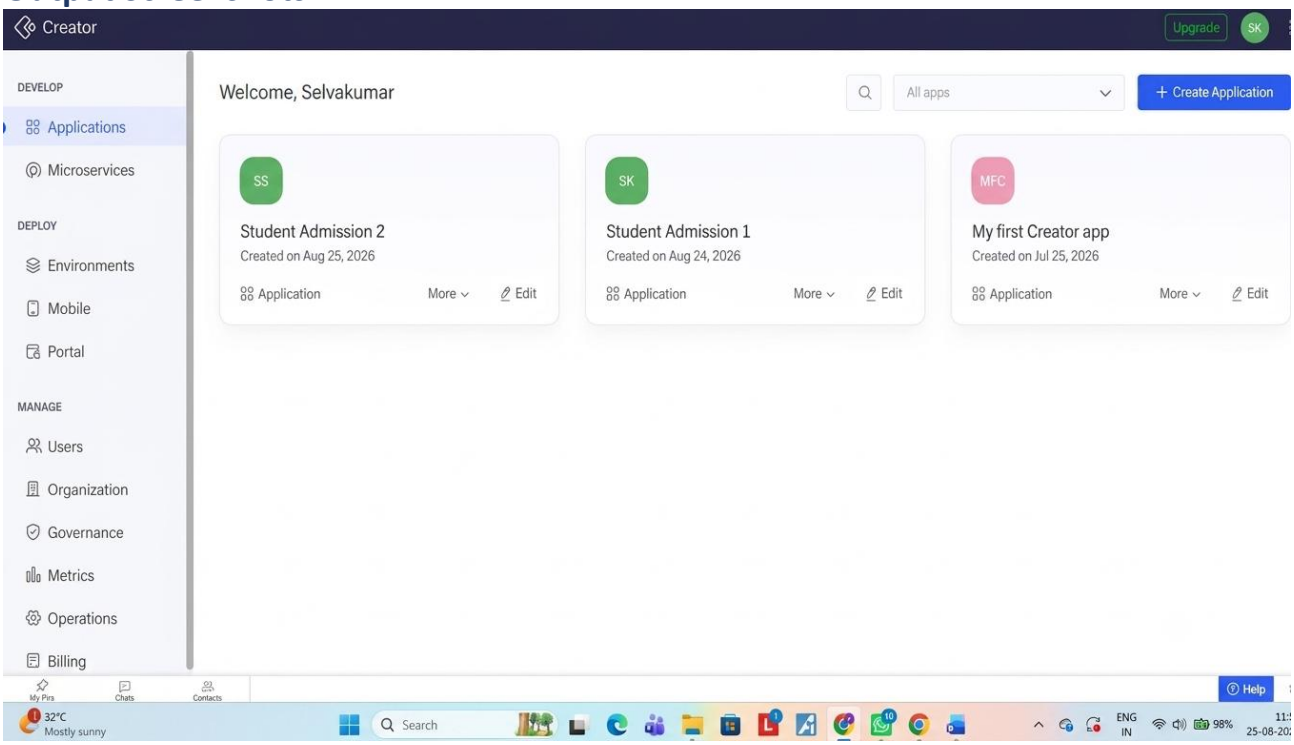

Figure 1: Zoho Creator home dashboard listing Student Admission 2, Student Admission 1, and My first Creator app.

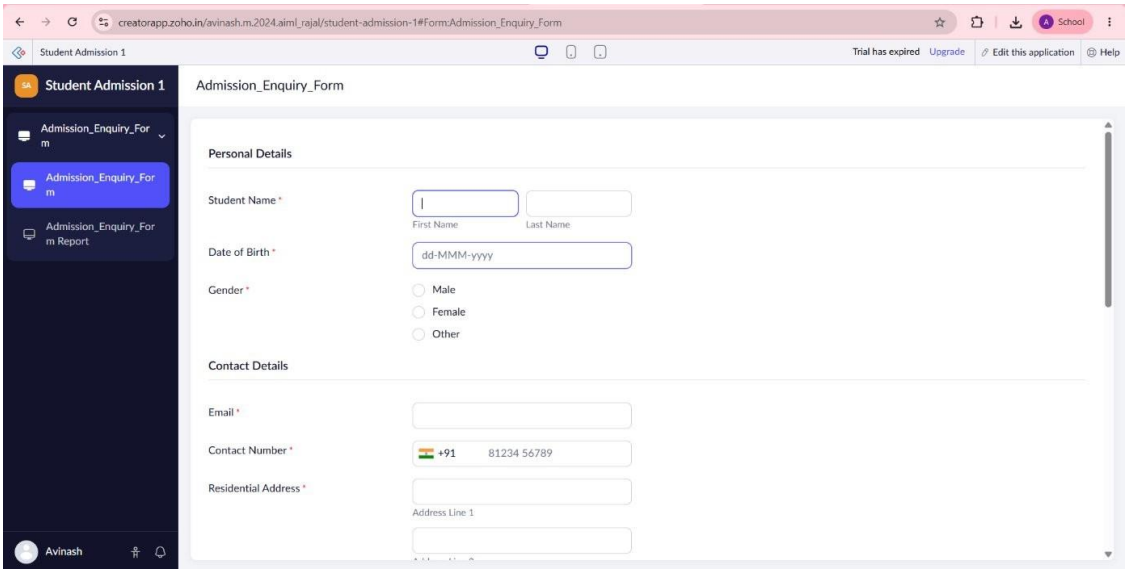

Figure 2: Admission_Enquiry_Form: Personal Details and Contact Details sections.

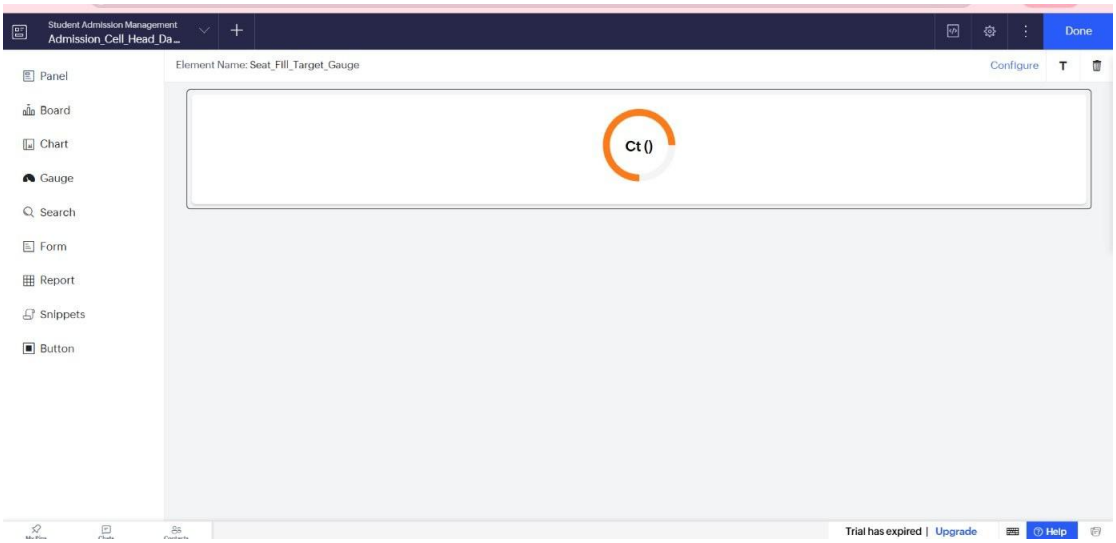

Figure 3: Page Builder showing the Seat_Fill_Target_Gauge element.

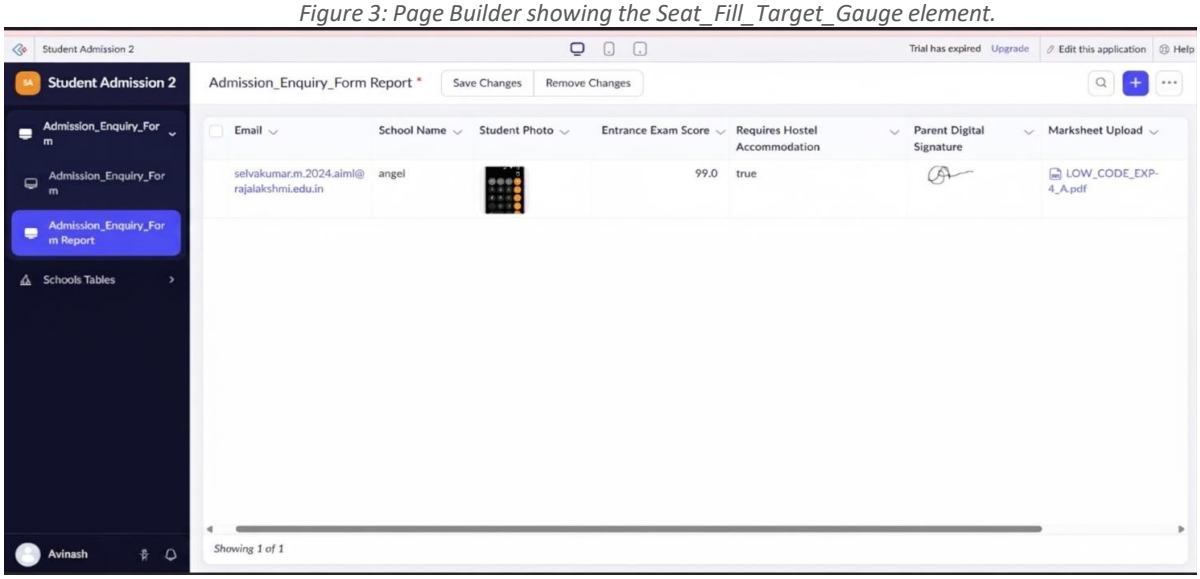

Figure 4: Admission_Enquiry_Form Report with one record.

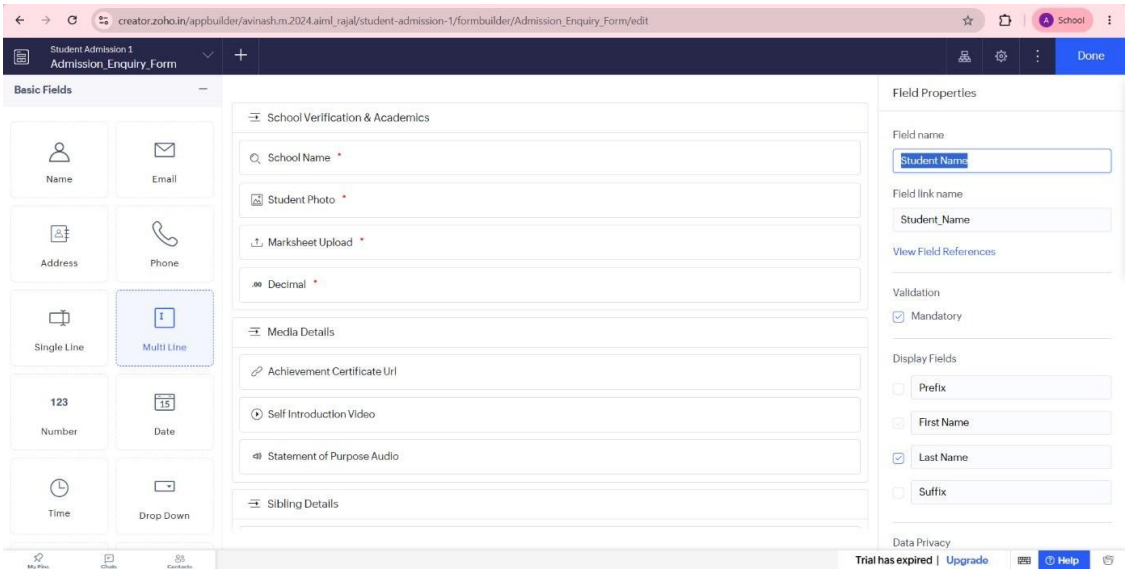

Figure 5: Form Builder: School Verification & Academics, Media Details, and Sibling Details sections.

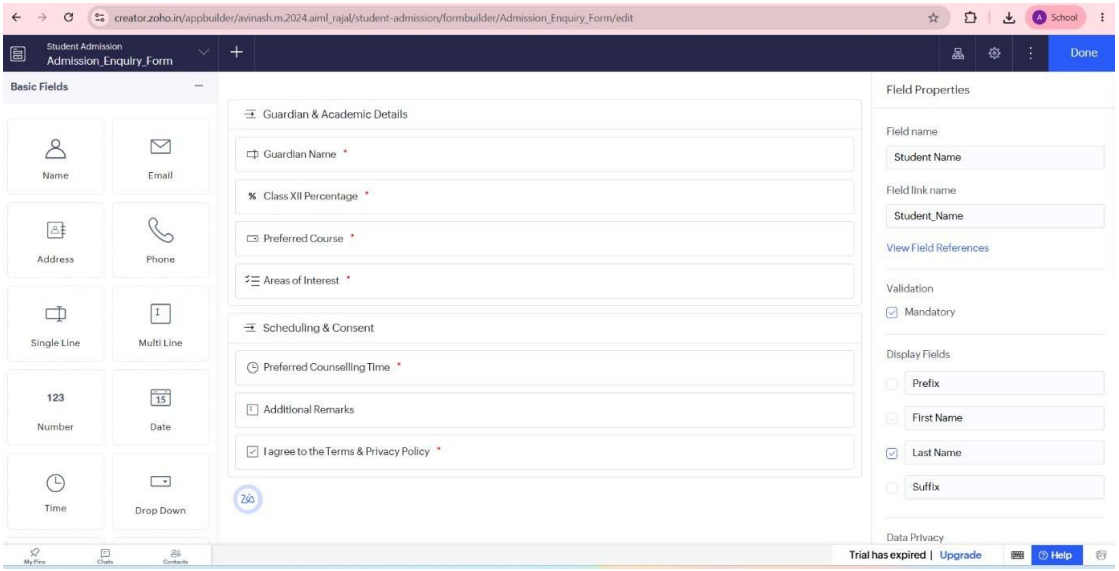

Figure 6: Form Builder: Guardian & Academic Details and Scheduling & Consent sections.

Result

A Zoho Creator account was successfully created, and the platform architecture and user interface were explored. The experiment demonstrated that Zoho Creator provides an intuitive low-code environment with tools such as forms, reports, workflows, pages, and dashboards, enabling rapid application development with minimal programming effort.
