Experiment 9

AI and Data Analytics Using Zoho Zia in Zoho Creator

Aim

To implement AI and data analytics using Zoho Zia in Zoho Creator to analyze Admission_Enquiry_Form data, identify admission trends and generate useful insights for the Admission Cell.

Procedure

1. Log in to Zoho Creator and choose the option to create or extend an application with Zia.

2. Describe the requirement as a Student Admission Enquiry Management (Advanced Edition) application.

3. Review the suggested use cases and data model, then create or extend the application.

4. Open the generated application and review analytics such as total enquiries, course preferences, scholarship eligibility and fee metrics.

5. Add sample applicant records so that the dashboard has data to analyze.

6. Use the Zia Build Agent to modify or extend the application through instructions.

7. Review reports for school, course, scholarship and application-fee patterns.

8. Study the charts and reports to identify admission trends.

Sample Prompts Given to Zia

• Create an application to manage student admission enquiries with student, guardian, academic and course details.

• Add a dashboard card showing the count of enquiries per preferred course.

• Add a report listing applicants who require hostel accommodation.

• Show average net application fee payable by scholarship eligibility range.

Sample Dashboard Metrics

Metric	Sample Value
Total admission enquiries	5
Average net application fee	■4,250
Course preference	AIML 2, CSE 2, ECE 1
Hostel requirement	Yes 3, No 2
Scholarship eligibility	0–10%: 2, 11–25%: 2, 26–50%: 1

Inspection / Verification Records (Sample)

Applicant	Verification Result	Note
Ananya Ramesh	Verified	School and marksheet verified
Arun Kumar	Needs Attention	Marksheets require clarification
Divya S	Pending	School lookup verification pending

Trends Identified

• AIML and CSE are the most requested courses in the sample data.

• Applicants requiring hostel accommodation form a significant portion of the sample.

• Higher scholarship eligibility reduces the computed net application fee.

Result

Zia-based AI and analytics helped analyze admission enquiry data, visualize important metrics and identify sample admission trends.

Conclusion

AI and analytics can assist the Admission Cell by summarizing enquiry data, generating dashboards and identifying patterns for counselling and planning.
